Enhanced Entity-Relationship (EER) Diagram - Sci Market

This EER focuses on specializations (User subtypes), identifying weak/associative entities, and compositions.

Notes

- Inheritance models role-based specializations of `User` (Admin, Support, Seller, Buyer).
- `OrderItem` is an associative entity between `Order` and `Product` (M:N resolved).
- `CartItem` acts as a weak/identifying entity under `Cart`.
- `ProductFile` is composition under `Product` (owned lifecycle).
